

Green Team Committee Agenda

Wednesday, June 10, 2015 6:00pm

Meetings end at 7:00pm unless the committee votes to end earlier or extend the time

Robertson Recreation Center

1641 Preuss Rd, Los Angeles, CA 90035

I. Call to Order & Roll Call

- a. Committee Members: Paula Waxman, Heather Leiken, Karen Smith-Laramy, Grant Cohen, Charmaine Colina, Martin Epstein, Anne Geffner, Saran Kirschbaum, Barry Levine, Aimee Zeltzer, Leo Portal, Elisa Leonelli

II. General Public Comment

III. Unfinished Business

- a. Save Water Save LA Town Hall – wrap up on event
- b. Rain Barrel Giveaway – wrap up on event
- c. SORO Fest – wrap up on event and Green Award

IV. New Business

- a. Motion: The Green Team votes to recommend that the SORONC Board write a Community Impact Statement in support of Motion 14-0907: This motion requests that City departments and bureaus, the DWP, LAX, and the Port of Los Angeles take actions to reduce greenhouse gas emissions to at least 80% below 1990 levels by the year 2050 and that the Department of Water and Power reduce greenhouse gas emissions 80% below 1990 levels by 2030. (Complete Motion & Community Impact Letter Attached)
- b. New Year Plans: Discussion around leadership and what the community would like to see the SORONC GT work on as we start a new fiscal year

V. Adjournment

Notes:

Special thanks to our official posting locations:

Demers & Associates, The Robertson Blvd Library, The Robertson Recreation Center, The Office of Councilmember Paul Koretz, Malcolm Brown Insurance Co., Hamilton High School, and the SORO NC and DONE websites.

In compliance with Government Code section 54957.5, non-exempt writings that are distributed to a majority or all of the Board in advance of a meeting may be viewed at our website (soronc.org) or at the scheduled meeting. In addition, if you would like a copy of any record related to an item on the agenda, please contact us via phone at (310) 295-9920 or via email at info@soronc.org.

SORO NC Board members abide by a code of civility (soronc.org/civilitycode). Any person who interferes with the conduct of a Neighborhood Council meeting by willfully interrupting and/or disrupting the meeting is subject to removal. A peace officer may be requested to assist with the removal should any person fail to comply with an order of removal by the Neighborhood Council. Any person who resists removal by a peace officer is subject to arrest and prosecution pursuant to California Penal Code Section 403.

SI REQUIERE SERVICIOS DE TRADUCCION, FAVOR DE NOTIFICAR A LA OFICINA 3 dias de trabajo (72 horas) ANTES DEL EVENTO.
SI NECESITA ASISTENCIA CON ESTA NOTIFICACION, POR FAVOR LLAME A NUESTRA OFICINA AL (213) 978-1551.

As a covered entity under Title II of the Americans with Disabilities Act, the City of Los Angeles does not discriminate on the basis of disability and upon request, will provide reasonable accommodation to ensure equal access to its programs, services, and activities. Translators, sign language interpreters, assistive listening devices, or other auxiliary aids and/or services may be provided upon request. To ensure availability of services, please make your request at least three (3) business days prior to the meeting you wish to attend by contacting the Department of Neighborhood Empowerment at (213) 978-1551 or e-mail NCsupport@lacity.org.

Community Impact Statement

June 1, 2015

LA Mayor, LA City Council and LADWP

Los Angeles, CA

RE: Community Impact Statement in SUPPORT of Council File #14-0907 CITY WIDE GREENHOUSE

GAS REDUCTION TARGET of 80% BELOW 1990 LEVELS by 2050, LADWP 80% BELOW 1990 LEVELS By 2030

Honorable Mayor, Members of the Los Angeles City Council, and the Los Angeles Department of Water and Power, the South Robertson Neighborhoods Council joins, to date, fifteen other neighborhood councils in supporting Los Angeles's climate action goals to reduce greenhouse gas emissions by 80% of 1990 levels by 2050 and the Department of Water and Power greenhouse gas emissions reduction target of 80% below 1990 levels by 2030.

It is important that the City of Los Angeles join San Francisco, Boston, New York, Toronto, and Chicago in making this commitment to protect the health and safety of communities, local and regional ecosystems, and the long term stability of the global climate. In addition to significant health and safety benefits, this move will push our region toward a transition to a clean energy economy based on efficiency, conservation, and renewable energy sources, with the possibility of tens of thousands of associated employment opportunities.

Sincerely,

Doug Fitzsimmons, President, South Robertson Neighborhoods Council

Complete Motion:

14-0907

Committees: ENERGY & ENVIRONMENT TRADE, COMMERCE & TOURISM

MOTION

Severe weather events, including drought, likely caused by a heating global climate, have afflicted people and cities around the world —costing hundreds of thousands of human lives and hundreds of billions of dollars annually. The Obama administration recently released the Third National Climate Assessment, which states that the warming of the planet, with human consumption of fossil fuels, will have severe consequences for every region of the United States.

"Risky Business," a report on the climate change threats to the U.S. economy released by former U.S. Treasury Secretary Henry Paulson, ex-New York Mayor Michael Bloomberg and hedge- fund billionaire Tom Steyer, states that climate impacts could cost businesses billions of dollars.

The United Nations' Intergovernmental Panel on Climate Change (IPCC) released its Fifth Assessment Report (2014) which addressed worldwide impacts of and vulnerabilities to climate change. According to The New York Times, the IPCC found that "decades of foot-dragging by political leaders had propelled humanity into a critical situation, with greenhouse emissions rising faster than ever," and that, "Though it remains technically possible to keep planetary warming to a tolerable level, only an intensive push over the next 15 years to bring those emissions under control can achieve the goal."

The U.S. Environmental Protection Agency states that "in low income communities, [climate] impacts have already been distressing, including heat-related illness and death; respiratory ailments; increases in the proliferation of infectious diseases; unaffordable rises in energy costs; loss of farm land, and crushing natural disasters." Disproportionately, the burden of dirty energy is born by low-income communities and communities of color. Yet, an equitable expansion of clean energy presents the potential for an unprecedented investment in these same communities.

UCLA and the City's climate change report series, "Mid-Century Warming" and "Mid- and End- of-Century Snowfall in the Los Angeles Region," shows a tripling and quadrupling of extreme heat days in the City and that the region's mountains may see a reduction in snowfall of up to 42% below annual averages, if greenhouse gas emissions continue to increase. If immediate efforts are made to substantially reduce emissions, mid-century loss of snow will be limited to 31%. If emissions are not curbed, the mountains will lose 66% of their snowfall by the end of the century, compared with present day. In response, UCLA has enacted a university-wide Grand Challenge target of 100% renewable energy in the Los Angeles region by 2050.

A target for reducing all greenhouse gases 80% below a 1990 baseline by the year 2050 is the scientifically-accepted minimum necessary to avoid the most dangerous climate change scenarios. Unfortunately, most countries are off track from meeting the intermediate 2020 goals, which stresses a need for immediate and decisive action. A number of States, including California and New York, and Cities, including New York, Boston, Chicago, San Francisco, Portland and Minneapolis, have pledged to cut their emissions 80% below 1990 levels by 2050.

In 2007, the City established an outline for initial reductions of greenhouse gas emissions 35% below 1990 levels by 2030. City departments have taken steps

accordingly, including concerted efforts by two proprietary departments whose operations make up the largest shares of emissions.

In 2010, the City's Department of Water & Power (DWP) met its Renewable Portfolio Standard (RPS) goal of 20% and is on its way to reaching 33% by 2020. With its announced exit from coal power, DWP is well on track to reduce its emissions by at least 58% below 1990 levels by 2030.

The Port of Los Angeles adopted a Clean Air Action Plan which cut its diesel and smog forming pollution by half. A commensurate effort on greenhouse gases is desirable and appropriate.

The City is a worldwide leader, with a network of 25 Sister Cities and 3 friendship cities on 6 continents, and its policies can substantially influence policy-making elsewhere. Adoption of an aggressive policy addressing climate change could significantly and positively shift the world's current status on climate policy and deliver tangible improvements to the lives of Angelenos.

Reductions in fossil fuel burning will have a measurable impact on the nearly 47,000 asthma-induced emergency room visits across Los Angeles County every year, while the transition to clean energy across California has already spurred 47,000 jobs in the solar industry. DWP's 150 MW feed-in-tariff is on track to create 4,500 green jobs and generate \$500 million in economic development, while its energy efficiency programs are expected to create 11,000 jobs by 2020. Additionally, due to its large numbers of at-risk climate communities, the City could be eligible to receive elevated levels of support from the State's Greenhouse Gas Reduction Fund, Proposition 39, and other state and federal funding sources. Climate adaptation and resiliency can stimulate new technologies and industries, attract capital, produce jobs, and generally forge a cleaner, more sustainable future for our children.

Many organizations throughout the region are already engaged in climate mitigation activities which the City has or could adopt, including, energy efficiency retrofits and educational campaigns; deployment of rooftop solar PV and solar water heating; transportation fuel conservation and switching to cleaner renewable fuels; reduction of wastes, especially organic materials, to landfills; waste conversion technologies; "cool roof" technologies; increasing plant and tree coverage; conversion of hardscapes that create "heat island" effects to permeable materials or plant-based surfaces; and, as the import of water uses great amounts of energy, water conservation, capture and reuse.

Given the above, the City should pursue a Citywide greenhouse gas emissions reduction target of 80% below 1990 levels by 2050 and a Department of Water & Power greenhouse gas emissions reduction target of 80% below 1990 levels by 2030.

I THEREFORE MOVE that the Council direct the Los Angeles World Airports, L.A. Sanitation, Port of Los Angeles, Bureau of Street Services, Department of Transportation and General Services Department to report back to the Council in 90 days on actions they can take to reduce the City's carbon dioxide and other greenhouse gas emissions, both stationary and mobile, to at least 80% below 1990 levels by 2050; including the implementation of a greenhouse gas emissions reduction target of 80% below 1990 levels by 2050 as a Citywide objective and ways to incentivize City departments to meet and exceed these targets.

I FURTHER MOVE that the Council direct the Department of Water and Power to report back to the Council in 90 days on actions they can take to reduce their carbon dioxide and other greenhouse gas emissions to at least 80% below 1990 levels by 2030.

I FURTHER MOVE that the Council direct DWP, L.A. Sanitation and the Department of Transportation to work with all City departments as well as coordinating with UCLA's Grand Challenge, its Institute of the Environment and Sustainability, its Luskin Center for Innovation, and other relevant business, environmental and environmental justice organizations, to do a carbon risk assessment of currently-anticipated climate change, a greenhouse gas inventory of the City, and produce a Climate Action Plan for the City as a whole in order to identify affordable pathways and highest priority near-term and long-term actions needed to actively reduce the City's carbon dioxide and other greenhouse gas emissions, by the end of 2014.

I FURTHER MOVE that, in the spirit of worldwide cooperation, the Council request that the Sister Cities of Los Angeles ask its member cities who have not already done so to adopt equally-aggressive or stronger greenhouse gas emission reduction policies and targets.

I FURTHER MOVE that the Council direct the Department of Neighborhood Empowerment to engage the 96 neighborhood councils of Los Angeles to assist in outreach for this effort.

I FURTHER MOVE that the Council direct the City Administrative Officer to report back to Council in 90 days on potential financial impacts to the City from possible worst case climate change scenarios: including, continued business-as-usual scenarios where global average temperature rises to 3 degrees C, 4.5 degrees C and 6 degrees C; and mitigated climate change scenarios where global emissions are held at 1990 levels, or reduced 80% below 1990 levels.
